Guidelines for Prompting

In this lesson, you'll practice two prompting principles and their related tactics in order to write effective prompts for large language models.

Setup

Load the API key and relevant Python libraries.

In this course, we've provided some code that loads the OpenAI API key for you.

```
In [ ]: import openai
import os

from dotenv import load_dotenv, find_dotenv
_ = load_dotenv(find_dotenv())

openai.api_key = os.getenv('OPENAI_API_KEY')
```

helper function

Throughout this course, we will use OpenAI's `gpt-3.5-turbo` model

About 375 calories

DeepLearning.AI

Software Applications

Cost intuition

成本直觉

How much does it cost?

Example prices

	OpenAI/GPT3.5	OpenAI/GPT4	Google/PaLM 2	Amazon/Titan Lite
Input tokens	\$0.0015/1K tokens	\$0.03/1K tokens	\$0.0005/1K tokens	\$0.0003/1K tokens
Output tokens	\$0.002/1K tokens	\$0.06/1K tokens	\$0.0005/1K tokens	\$0.0004/1K tokens

What is a token?

the example Andrew	1 token
translate programming	2 tokens
tonkotsu	4 tokens

300 words
400 tokens

Roughly, 1 token = 3/4 words

Estimating Cost

Typical adult reading speed: 250 words/minute.

How much would it cost to keep someone occupied for 1 hour?

$$\begin{array}{r} 60 \times 250 = 15,000 \leftarrow \text{output} \\ + 15,000 \leftarrow \text{prompt} \\ \hline 30,000 \\ \hookrightarrow 40,000 \text{ tokens} \end{array}$$

$$1 \text{ token} \approx \frac{3}{4} \text{ word}$$

Cost: \$0.002 cents / 1K tokens.

$$\$0.002 \times 40 = \$0.08$$

Answer questions based on a website's articles

The screenshot shows the Coursera Coach AI interface. At the top, it says "coursera coach" and "Beta". Below that, a user asks "What is supervised learning?". The AI responds with a detailed explanation: "Supervised learning is a type of machine learning where the algorithm learns from labeled examples. In supervised learning, the algorithm is given input-output pairs, where the input is called the feature and the output is called the label. The algorithm learns to map the input to the correct output by finding patterns and relationships in the data. The goal of supervised learning is to train a model that can accurately predict the output for new, unseen inputs. Some examples of supervised learning tasks include predicting housing prices based on features like size and location, classifying emails as spam or not spam, and recognizing handwritten digits." The timestamp is 02:18 PM. There are "Like" and "Dislike" buttons at the bottom.

What is supervised learning?
Supervised learning is a type of machine learning where the algorithm learns from labeled examples. In supervised learning, the algorithm is given input-output pairs, where the input is called the feature and the output is called the label. The algorithm learns to map the input to the correct output by finding patterns and relationships in the data. The goal of supervised learning is to train a model that can accurately predict the output for new, unseen inputs. Some examples of supervised learning tasks include predicting housing prices based on features like size and location, classifying emails as spam or not spam, and recognizing handwritten digits.

Big Idea: LLM as reasoning engine

- LLMs have a lot of general knowledge, but they don't know everything
- By providing relevant context in the prompt, we ask an LLM to read a piece of text, then process it to get an answer

推理引擎

- We're using it as a reasoning engine to process information, rather than using it as a source of information

Learns from 1000s to 10,000s of words

Why fine-tune?

To carry out a task that isn't easy to define in a prompt.

Example 1: Summarize in certain style or structure

Customer: *Hi, my monitor won't turn on.*

Agent: *I'm sorry to hear that. What model is it?*

Customer: *It's the 27-inch 4K.*

Agent: *Can you tell me the model number?*

Customer: *Hang on one sec...I'm looking on the back...it's the MK401-27X.*

Agent: *Ok, thank you. Can you try*

 *unplugging the HDMI cable*

and reinserting?

Customer: *Ok, doing that now. Hmm, the image appeared for a few seconds then disappeared.*

Agent: *Ok, try jiggling the cable while it is in the socket.*

Customer: *Oh, I see the image coming and going.*

Agent: *Ok, I think you have a defective cable. We will send you a replacement.*

~~Customer tells agent about a problem with monitor.~~

Why fine-tune?

To carry out a task that isn't easy to define in a prompt.

Example 1: Summarize in certain style or structure

Customer: *Hi, my monitor won't turn on.*

Agent: *I'm sorry to hear that. What model is it?*

Customer: *It's the 27-inch 4K.*

Agent: *Can you tell me the model number?*

Customer: *Hang on one sec...I'm looking on the back...it's the MK401-27X.*

Agent: *Ok, thank you. Can you try*

 **Unplugging the HDMI cable**

and reinserting?

Customer: *Ok, doing that now. Hmm, the image appeared for a few seconds then disappeared.*

Agent: *Ok, try jiggling the cable while it is in the socket.*

Customer: *Oh, I see the image coming and going.*

Agent: *Ok, I think you have a defective cable. We will send you a replacement.*

MK401-27KX was reported as broken by customer 5402. Cable identified as problem. Replacement issued.

Why fine-tune?

To carry out a task that isn't easy to define in a prompt.

Example 2: Mimicking a writing or speaking style

Write a speech about generative AI in the voice of Andrew Ng

Write a speech about generative AI in the voice of Andrew Ng

Hey everyone, good to see all of you. So, what I want to do today, is share some thoughts with you about how generative AI is going to change the way that your company [...]
 Fine-tuned model

Why fine-tune?

To help LLM gain specific knowledge.

Medical notes

Pt c/o SOB, DOE. PE: RRR, JVD absent, CTAB.
EKG: NSR. Tx: F/u w/ PCP, STAT CXR, cont. PRN O2.

Extract from admission note for patient with shortness of breath

Why fine-tune?

To help LLM gain specific knowledge.

Legal documents

Licensor grants to Licensee, per Section 2(a) (iii), a non-exclusive right to use the intellectual property, contingent upon compliance with fiduciary duties outlined in Section 8, paragraphs 1-4, and payment as specified in Schedule B, within 15 days hereof.

Why fine-tune?

To help LLM gain specific knowledge.

Financial documents

Counterparties engaged in OTC derivatives transactions must comply with margin requirements pursuant to Regulation (EU) No 648/2012, including initial and variation margin calculations."

Why fine-tune?

To get a smaller model to perform a task.

- Lower cost/latency to deploy
- Can run on mobile/laptop (edge devices)

Large model: 100B+ parameters Small model: 1B parameters

Classify the following review as having a positive or negative sentiment:

Really enjoyed my vegetable biryani

Positive

Classify the following review as having a positive or negative sentiment:

The noodle soup was too salty

Negative

Classify the following review as having a positive or negative sentiment:

The staff sang happy birthday to me!

Positive

Can work well with 500-1000 examples.

DeepLearning.AI

Advanced Technologies: Beyond Prompting

Pretraining an LLM

When should you pretrain an LLM?

Many teams are pretraining general-purpose LLMs by learning from internet text.

- May take \$10s of millions, many months, huge amount of data

For building a specific application:

- Option of last resort
- Could help if have a highly specialized domain
Introducing BloombergGPT, Bloomberg's 50-billion parameter large language model, purpose-built from scratch for finance

Bloomberg

March 30, 2023

DeepLearning.AI

Advanced Technologies: Beyond Prompting

Choosing a model

Model size

1B parameters:	Pattern matching and <u>basic knowledge</u> of the world.	Restaurant review sentiment
10B parameters:	<u>Greater</u> world knowledge. Can follow basic instructions.	Food order chatbot
100B+ parameters:	Rich world knowledge. Complex reasoning. <u> </u>	Brainstorming partner

Closed or open source?

Closed-source models

(Cloud programming interface)

- Easy to use in applications
- More large/powerful models
- Relatively inexpensive
- Some risk of vendor lock-in

Open-source models

- Full control over model
- Can run on your own device (on-prem, PC, etc.)
- Full control over data privacy/access
